MODULE 1: INTRODUCTION TO PROGRAMMING IN C#

Exercise 2

Create a form, as before, with the same 'Quit' button (with suitable names for the form and the button).

Add a new button and change its name to 'btnHello' and its text to 'Say Hello'. Then add a text box which will have the default name of textBox1. For the moment, stick with this name.

Now double-click on the btnHello button and insert the following code:

textBox1.Text = "Hello World";

Run the program and click the buttons.
