MODULE 1: INTRODUCTION TO PROGRAMMING IN C#

Exercise 6

Populating and Formatting a List Box

Create a program with a form containing a list box, two text boxes, a button labelled 'Add Item' and another button labelled 'Quit'.

The user will enter an item name e.g. jam in one box and a quantity in the other. When the user clicks 'Add Item' the contents of the text boxes will be transferred to the list box.

Try this first without formatting and then with formatting.
