MODULE 1: INTRODUCTION TO PROGRAMMING IN C#

Exercise 7

Creating and Using a Combo Box

Create a program with a form containing a combo box and a text box as well as the usual 'Quit' button.

Add some items to the combo box in the Form_Load part of your program (double click on the form to show this section).

By double-clicking on the combo box, you can see the section of code for comboBox_SelectedIndexChanged. Add the code here to display the selected item in the text box.
